WHAT'S NEW

v22.1

Kernel Exchange Suite

Introduction

Kernel Exchange Suite is a complete solution for Exchange EDB, Outlook PST, OST Recovery, and other migration needs. You can recover all your mailboxes and data from corrupt EDB files and restore them without any data loss. It makes your recovery a quick and painless process, so that you can recover deleted mailboxes, even after the severe cases of Exchange corruption.

You can also migrate your user mailboxes (and shared mailboxes) from live Exchange Server to online Exchange Server. You can export public folders, archive mailboxes, and single/multiple mailboxes (full or selected items of the mailboxes) during the migration.

Updates

⋯⋯➤ Better recovery of email file properties like To, From, Cc, and other metadata.

⋯⋯➤ Now login your MFA-enabled Office 365 accounts

⋯⋯➤ Better performance and precision in recovery and migration tasks.

⋯⋯➤ Secure connection for Office 365 through Modern Authentication login.

These new features in version 22.1 will improve the Exchange recovery and migration tasks considerably in all Exchange versions.
