

WHAT'S NEW

v23.2

Kernel Migrator for
SharePoint

Introduction

Kernel Migrator for SharePoint is an effective migration tool which allows the user to migrate SharePoint data to another SharePoint Server account. It accesses the sites, sub-sites, list and libraries, site collection from its source and place them neatly at the desired destination.

There is an inbuilt scheduler which lets the user schedule the migration at a fixed time and the migration will start automatically at the right time. It also migrates the metadata along with the primary data.

Additionally, there are multiple migration available like Public Folder to SharePoint, SharePoint-to-SharePoint, Windows File System to SharePoint, OneDrive for Business, MS Teams, and Google Drive.

Updates

-> Simplified login wizard to connect multiple sites quickly
-> Better support for Google Drive migration for personal account
-> New filters (chats, Channel posts and tabs, etc.) **for selective Teams Migration.**
-> **Increased speed for SharePoint List/Library content migration.**
-> **Better support for bulk migration using CSV file.**
-> Enhanced speed for OneDrive and Google Drive Migration.

With the added features in the new version, the tool becomes more efficient, accurate, and secure in performing SharePoint migration.
